A Mapping of icon names to macros names	22
Index: General	23
Index: L^AT_EX Macros	28

1 What is this?

L^AT_EX style (`awsicons.sty`) which allows you to use the [AWS architectural icons](#) in your L^AT_EX documents.

This Go program, `aws2tex`, creates:

- `awsicons.sty` file
- L^AT_EX-compatible PDF versions of icons (and written to the `icons_tex` directory, using Inkscape).
- This document, which is to illustrate as well as index these icons and their corresponding L^AT_EX macros.
NB: Not all icons are converted:
 - For *Resources*, only the `_Light` versions. The `_Dark` are omitted.
 - For *Services*, only the `_64` versions. The lower resolution `_16`, `_32`, `_48` are omitted.

For instructions on how to generate this document with *all* icons, please see the instructions in the [README.md](#) at the github repo.

This document is: <https://github.com/gnewton/awsArchIcons2LaTeX/awsAllIcons.pdf>

This document also includes hyperlinks to Google searches of the titles of each icon.

2 How to use it?

There are two parts:

1. `awsicons.sty` file
2. directory with all of the icons rendered into \LaTeX compatible form (in the repo, this is: `icons.tex`).

All you need to do is use the package to your \LaTeX document using `\usepackage` (after having added the `awsicons.sty` file to where \LaTeX can see it, or put it in the same directory as your document) AND add the directory containing all the generated icons to the `\graphicspath{\dots}`.

For example:

```
% preamble
\usepackage{awsicons}
\graphicspath{../icons_tex/}
% after \begin{document}
Here is a 1cm API Gateway:
\RAPIGatewayEndpoint{1cm}
Here is a 3cm Lambda function:
\RLambdaLambdaFunc{3cm}
```

Resulting in:

Here is a 1cm API Gateway: Here is a 3cm Lambda function:

[Without the gray background]

2.1 Examples

There are more complex examples in the [examples](#) directory, including one which recreates an AWS Architecture blog diagram.

- [Simple example](#)
- AWS Architecture blog diagram: *Building a Controlled Environment Agriculture Platform*¹, by Ashu Joshi, 2020.12.22.

¹<https://aws.amazon.com/blogs/architecture/building-a-controlled-environment-agriculture-platform/>

3 Sources

The AWS Architecture icons used here are from <https://aws.amazon.com/architecture/icons/>.

© Glen Newton 2020

Icons in this document (I believe) are: © Amazon Web Services (AWS)

A Mapping of icon names to macros names

In order to have reasonably short macro names, the following mappings have been made by `aws2tex`, being careful not to introduce any naming collisions. In addition, \LaTeX macros cannot contain numbers, so all numbers have been mapped to words, i.e. $1 \rightarrow \text{One}$, $5 \rightarrow \text{Five}$, etc. The below mappings are applied in order, followed by the number mappings.

1. `example`
